Bunny made from white and black Raysin

Instructions No. 2973

Difficulty: Advanced

Working time: 4 Hours

Don't the bunnies look classy? The combination of **white and black cast bunnies** completes the look of the bunny gang. The beautiful **gold leaf accents** turn the bunnies' appearance into a sophisticated decoration.

This is how the rabbits are watered:

For the **"bunny" silicone mold**, mix 3 tablespoons of Raysin with water to form a creamy mixture. Carefully pour into the mold. Tap the filled mold lightly on the surface several times so that air bubbles rise. Remove from the mold after approx. 3 hours and allow to dry thoroughly.

The **black Raysin** is mixed in the same way as described above. After use, the full mold must be cleaned thoroughly!

Once all the bunnies have dried through, the areas to be gilded can be coated with the paste-like **gold leaf priming milk** can be coated. Leave to dry for approx. 1 hour . Then, using a dry brush, apply the **leaf metal** applied with a dry brush.

To get straight lines, you can mask the bunny with crepe-adhesive tape before designing it. You can simply remove it again after the design.

Mix approx. 18 tablespoons of Raysin with water for the **oval deco plate casting mold**. Do not fill the mold to the brim! Leave approx. 5 mm space. This will make it easier to remove the plate from the mold once it has hardened.

Finally, you can arrange the bunny ribbon nicely on the decorative plate.
