Christmas cards with 3D effect

Instructions No. 2690

Difficulty: Beginner

⊙ Working time: 1 hour

Create Christmas cards with a fascinating 3D effect using edding 5400 Acrylic 3D Double Liners. The cards are very easy to make thanks to the free motif template and the clear step pictures. Take a look at the matching video tutorial, so you're guaranteed to succeed!

Design Christmas cards with a 3D effect

First print out the free template and hatch the back of the motif with a soft pencil.
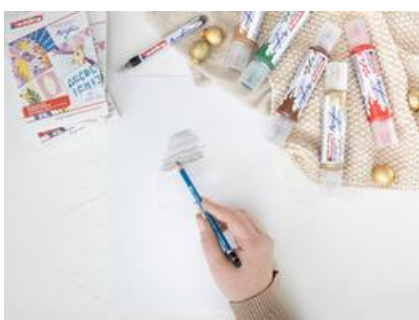

Place the template face up on the postcard so that the motif is centred.

Trace all the lines of the design with a pencil. This makes it easy to transfer the motif onto your postcard.

Now use the wide side of the edding Acrylic 3D Double Liner to trace the lines of the design. Tip: Add a few small accents around the motif in the form of small dots.

Use the edding acrylic marker to finely complete the lettering on your postcard.

The motif must now dry for a few hours, after which the homemade Christmas card is ready.

You too can conjure up an elegant Christmas card so quickly and easily with just a few materials.

Now a few personal words are missing on the back of the card and it can be sent to your family and friends.

We are sure that your loved ones will be impressed!
