

Gieß-Design Idee für Nussknacker

Instructions No. 1684

🔪🔪🔪 Difficulty: Advanced

🕒 Working time: 50 Minutes

Cast concrete can be used to create particularly beautiful and practical shapes, especially at Christmas time. Star bowl, Santa Claus and nutcracker are a timelessly beautiful trio that fits into every home.

Casting design with creative concrete

The creative concrete is mixed with water according to product instructions to form a creamy mass. The mass can easily be **poured** into the finished casting mould " **star shell**".

So that the **Acrylic forms** can be filled with concrete mass, they are put together and provided with a hole with the hot glue gun. This is burned into each Acrylic form for filling. With a measuring cup the creative concrete is poured into the prepared Acrylic forms .

After the concrete has dried for at least 24 hours, the closed Acrylic forms are lightly tapped all around the table. Then they can be opened carefully and the respective figure can be removed. Possible protruding casting edges are treated with Sandpaper .

Painting

The edge of the star bowl is simply painted with golden paint. This small design is already enough to transform the simple practical bowl into a noble living object.

The Santa Claus and nutcracker figures are painted with a fine brush in the classic Christmas colours white, Red, Black and Gold painted.
