Perlenschmetterling

Instructions No. 511

Create a beautiful pearl butterfly!

And this is how it works

Big star:

For the wings, alternate two adjacent strands with large and small ones. Two further adjacent strands also, but with a different colour. Equip the opposite strands in exactly the same way. The remaining rocailles are then threaded onto the remaining ones. For the feelers of two only adjacent strands, place a large acrylic bead at the end of each strand. The last two are simply twisted into each other for the body and connected with an eyelet.

Small star:

Star with optional pearls. Bend the eyelet and thread the string next to it through and connect it with an eyelet. Put the small star in the middle of the big star and connect it with wire.
